

# LivePublication: Extending Globus Compute with RO-Crate provenance models

Augustus Ellerm, University of Canterbury  
Mark Gahegan, University of Auckland  
Benjamin Adams, University of Canterbury  
Nelis Drost, University of Auckland

# LivePublication: From Data, To Computation, To Publication

Logos for 'quarto' and 'jupyter'.

L3: Programmatic Article compilation

Logos for 'globus' and 'CWL' (Common Workflow Language).

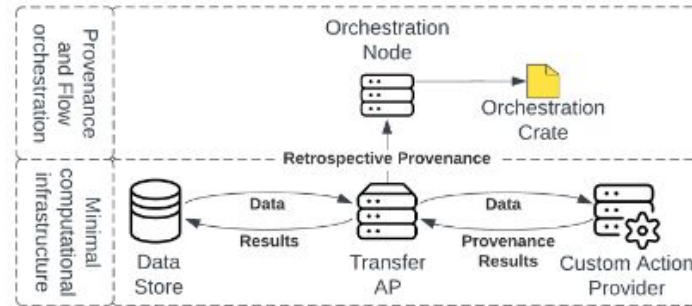

L2: Workflow Orchestration

Logos for 'Nectar Research Cloud' and 'amazon web services'.

L1: Infrastructure and Hardware

# Minimal WMS infrastructure w/ Globus Compute

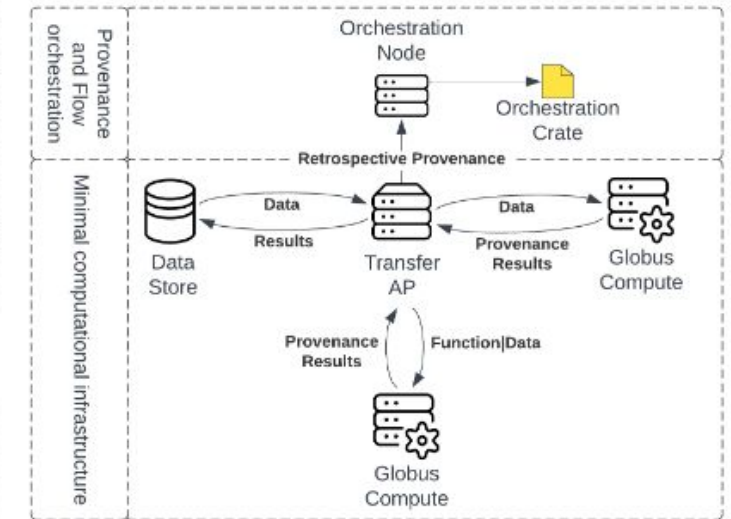

- Support three patterns of configuration
  - LP Action Provider
  - LP Globus Compute
  - Mixed
- Across federated environments
- For re-executing, long lasting flows

(a) Action Provider infrastructure

(b) Globus Compute infrastructure

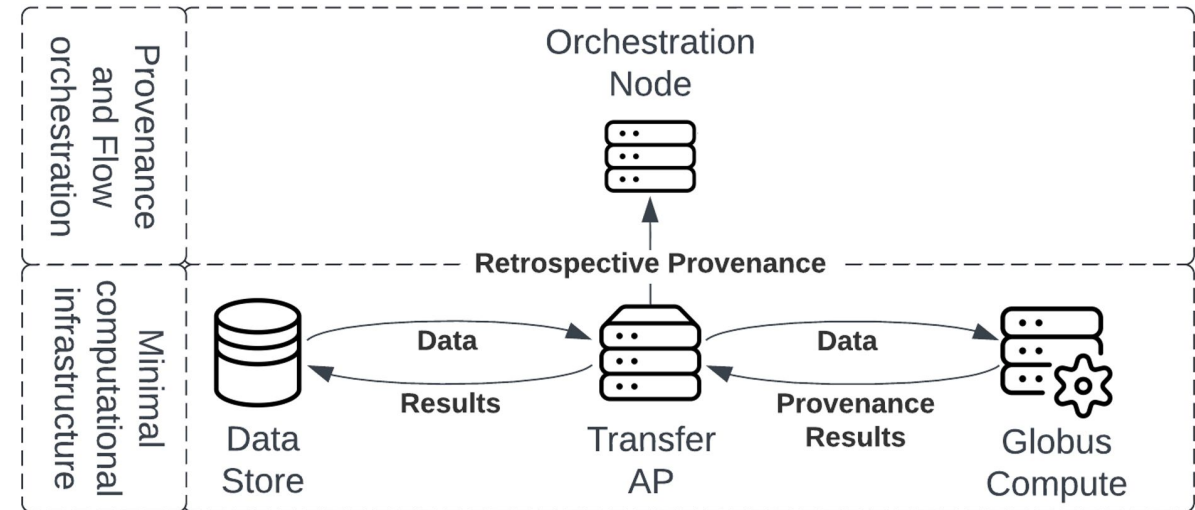

(c) Mixed compute provider infrastructure

Globus Flows provenance aware configurations

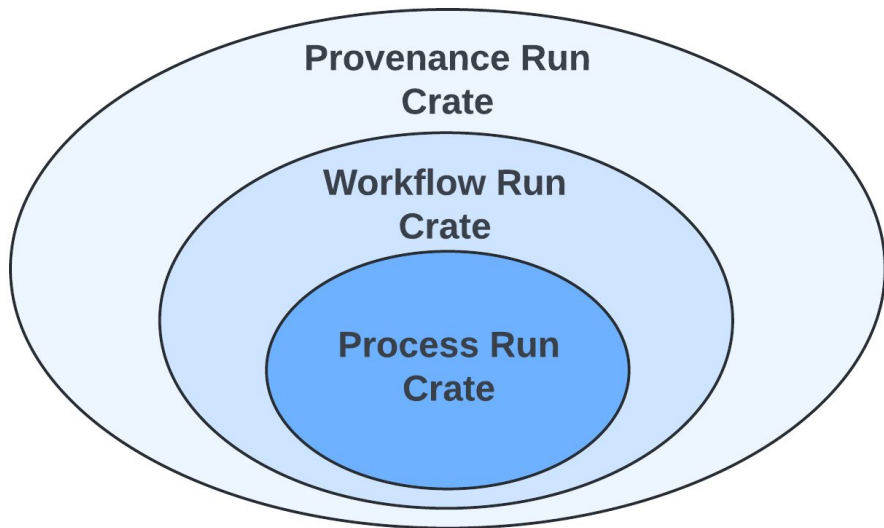

# Workflow Provenance

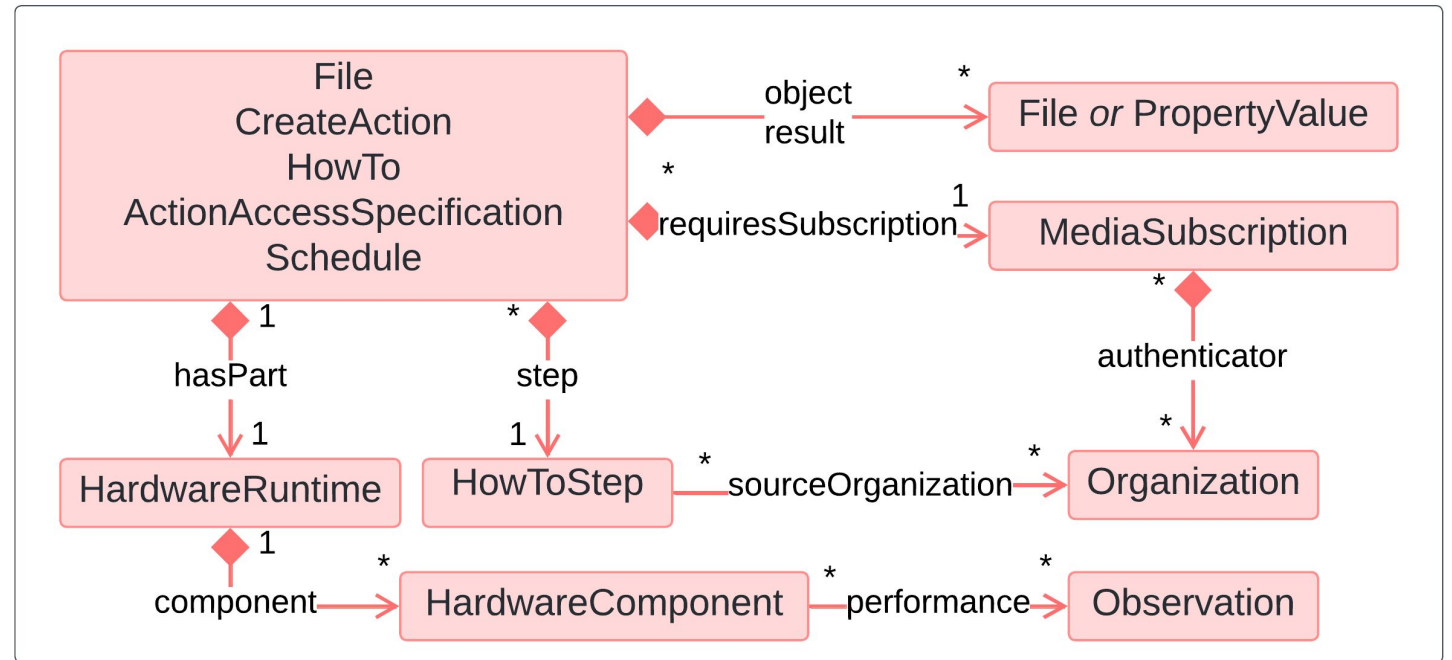

- Provenance Container
- Represents discrete runs of workflows, formal parameters, and domain specific metadata
- Standardization of this artefact can enable interoperable WMS & Programmatic Article technologies
